

We provide students and schools access to high quality performing, visual, and creative arts education. Classes can be tailored to varying and mixed age groups. Using the tenets of inquiry and project-based learning, students use research to inform their developing performing and visual artistic skills. While learning these new skills, students build deep understandings about themselves as artists and make long-lasting connections to the foundations of art, creativity, and the world around them.

High quality, experiential art education fosters:

- Confidence, Creativity, Critical thinking, Communication and Collaboration skills.
- Mental and emotional health and intelligence.
- Increased academic success.
- Joy in the classroom!

Visual Arts - Week to Week Curriculum Map
